About this app

This app was designed to allow users to read the public data stored on their NFC-compliant EMV banking cards, such as credit cards. EMV (Europay, Mastercard, and Visa) is a global standard for interbank transactions that utilizes microchips to store and protect data. In order to use this app, your card must be NFC (Near Field Communication) compliant, which means it is equipped with a microchip that allows it to communicate with NFC-enabled devices such as this app.

Kinda pointless really. Dont fall for donations under Extended functionalities if that's what you're

expecting. In fairness doesn't say you will. Only you help them. also it's up to you upgrading to pro. I did, again completely pointless. The info you get is completely useless to you. Some will give you the last few transactions. But with privacy an issue now a days. This is becoming rare as well.b if you want it to save your card number. Just take a pic. Cheaper or use a post-it note app.

I installed this to validate the effectiveness of an active rfid shield I had just bought. The app proved that the shield didn't work consistently. Satisfied with the app if not with the shield!

★★★☆☆ November 1, 2020

Was a great app! New version is a disappointment — it used to be possible to view the card number of Apple Pay cards from iPhones (which don't show last-4); now it's no longer an option, because you have to confirm the last 4 digits in this app first — which means you have to use Apple Pay at a vendor to get a receipt with the last 4, before you can use this app. Very disappointing to have such a downgrade in functionality in the latest version.
