# Smart access control designed for Gallagher

Want to retrofit your building with fully remote access control, smartphone keyless entry and 24/7 building logs?

Doordeck software is the worlds only access control aggregator, compatible with Gallagher access control software, plus many other popular access control systems.

Get in Touch

How it Works

Doordeck doesn't replace your existing Gallagher system, instead we work alongside it to make it into a keyless access control system.

Unlike other 'smart locks', there is no new hardware to install so we save you money (on average we're upto 45% cheaper than conventional access control).

Doordeck requires no new wires or downtime, just a piece of software which can be installed in moments.

More Installation Details

Features designed around our users

Doordeck offers tons of future-proof
features for your Gallagher locks.

Easy, Secure, Cost-Effective

Doordeck solves the clients logistical headache, security risks and expense by stopping the need to issue new or replacement key cards and fobs

- No additional cost to replace key cards or fobs

- No hassle and time needing to be spent on admin

- No central storage for library of keys required

- No security risk of key cards being lost, cloned or stolen

- No touching necessary, reducing the amount go contact with frequently touched surfaces

- No more key card sharing between visitors or colleagues

Manage All Buildings, Effortlessly

The added advantage for organisations with many buildings is being able to manage multiple sites just as easily as one building. Adding or removing users can be done via the web from anywhere 24/7.

Real Time Rich Data

Real time rich data provides unlocking times and volume to understand building occupancy levels and identify trends. Knowing the number of people that have entered a room to ensure a safe capacity is paramount.

Ready to go?

From one door to a thousand, we've got a plan designed perfectly for you. Get intelligent keyless entry that works with all your door access control systems today.

Fast and Reliable

Doordeck was the first company to embrace native Near Field Communications (NFC) on an iPhone for enabling door access. Unlocking is as quick and secure as Apple Pay.

Near Field Communications (NFC) is incorruptible and works first time every time. Bluetooth on the other hand is inconsistent, time-expensive and generally a bit clunky.

AMAG TECHNOLOGY

EQUIEM

TELTONIKA

We have two sites each with different access control systems, neither of which support smartphone access. We were worried we'd have to start from scratch at huge cost but the Doordeck system has slotted in right alongside.

Since integrating Doordeck with our existing ACT door access control hardware we have been able to provide smartphone zero touch door entry to our tenants, particularly important during these times where tenants want
